

# Diamond Pattern

In addition to our rectangular pattern flooring, we can also supply our range of Vitagrid diamond pattern flooring in mild steel.

This flooring is constructed of load bars spaced at either 38mm or 20mm separated by pressed spacer bars welded on the underside at every junction.

This is traditionally a strong and stable flooring which gives an excellent feeling of complete security and safety which is especially important when working at high levels. It also retains the benefit over solid plate flooring of transmission of light and air.

## Applications

Vitagrid diamond pattern flooring is particularly suited for:

- Power stations
- Water, Petrochem and Process industries
- Offshore installations
- Bridge roadways

## Standard Range

Readily available with:

- Plain or serrated load bearing bars
- 3mm or 5mm thick load bearing bars
- 38mm (VE38) or 20mm (VE20) gaps
- Self colour or galvanised
- Fully banded panels
